

AssetTrack™ for Smart Asset Tracking

Smartphone application for easy use

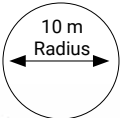

The **Superfy AssetTrack™** is a BLE enabled ruggedized beacon that can be attached to assets to enable a customer to gain insights around the location and utilisation of assets that are moved from time to time.

The device utilises the smartphones within an organisation to connect and send data to the cloud when a host device with the smartsensor app is within range.

Each time the beacon is able to connect to a device the data log history is sent including GPS coordinates of the smartphone at the time of connection.

Product Features

- Ruggedized BLE Beacon
- Integrated NFC Tag
- Coin style battery
- 10m Radius
- Location Information
- Updates with smartphone APP
- IP66 Rated Enclosure

NFC Tag

An NFC tag under the cover includes a serial number that is assigned to the beacon and mapped on the cloud dashboard

Hardened Plastic Enclosure

Hardened plastic enclosure allows for robust installation in harsh environments

IP66 Rated
Enables high pressure washer cleaning.

Typical Applications

Waste and Recycle Bins

Asset Tracking

High Value Asset Monitoring

Construction Waste

Medical Waste
